

## How to Make a Digital Contact Sheet in Photoshop

1. First, put all of the images you want in the contact sheet in a folder on your computer or flash drive.

2. Next, open up Photoshop and go to File > Automate > Contact Sheet II

- Third, change the Columns and Rows to the amount of photos you are submitting. If you are submitting 12 images, then 3 columns and 4 rows would be good.

- Fourth, go to **Choose** and select the folder with your images

- Click OK on that screen and the next. It will take few minutes for Photoshop to build the file but once it is finished, it will look like this:

- Once this is done, you can save your contact sheet on your computer/flash drive. Saving it as a JPEG will take up a lot less storage room. Then print out your contact sheet. If you are printing in the lab make sure you set up the printer to print in color.
