

# Variation for Fill a Photo with Photos Pattern

Here is an editing variation. This image is in the sample album

If you prefer the face to stand out more, you can place a layer mask on the pattern layer (Layer 1 in this diagram). Then use the brush tool on a low opacity to clear make the main face show up better.

Additionally, you can put a Black & White Adjustment Layer over the main face and use a Layer Mask and the Brush Tool to make the face or background in color or black and white.
