

A close-up, artistic photograph of a camera lens. The lens is dark and metallic, with several concentric rings visible. The text "EXETER-12" and "1:2.8" are engraved on the lens barrel. The focal length "F=3.5CM" is also visible. The background is dark and out of focus.

Exposure Control

Using light meter to control the amount of light allowed into camera

Exposure Control

Exposure Control

Increased exposure for a brighter image

Decreased exposure for a darker image

Exposure Control

Review

- Exposure Triangle
- Light meter function
- 18% gray

New information

- Exposure defined
- Exposure Compensation
- Define Stop
- Exposure Bracketing
- Why are we doing this?

Three functions of Exposure Triangle: Aperture Shutter Speed ISO

Light Meter

- Purpose = tells you **how much light** is being allowed into the camera based on the current **APERTURE**, **SHUTTER SPEED**, and **ISO settings**
- Averages all light in scene to **18% gray** which is ZONE V on Zone system scale
- Is correct most of the time

Zone Ruler

ZONE	DESCRIPTION
0	Maximum black
I	The first tone distinguishable from black with no detail
II	The first visible texture in a very dark area
III	Black with detail—a highly textured dark area with distinct detail; this zone is considered the shadow detail area for average value metering
IV	Dark gray
V	Middle gray, with 18 percent reflectance
VI	Light gray
VII	White with detail; the lightest area in the photograph that will have distinct texture or detail; this is the highlight area for the average value method
VIII	The brightest tone distinguishable from white
IX	Paper white

Zone Ruler

18% gray

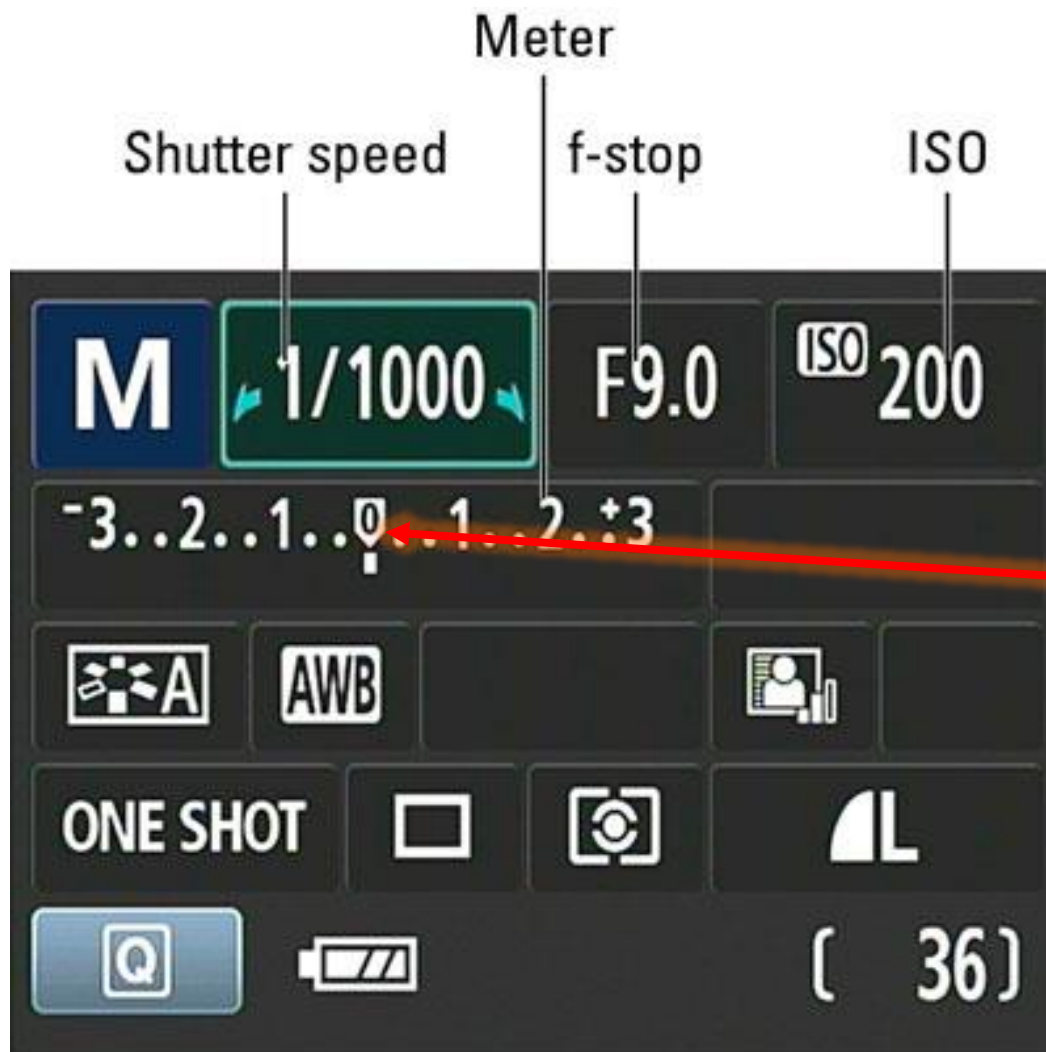

- Tone to which all light meters average the light given off by the scene which is being photographed

Zone Ruler

18% gray

What is an exposure?

Photography – Greek

photo = light
graphy = writing

Exposure

- Combined effect of ***volume*** of light hitting the film or sensor, its ***duration***, and the ***density*** of light sensitive surface
- ***Volume*** is controlled by the **aperture** (f-stop)
using the size of the opening
- ***Duration*** (time) is controlled by the **shutter speed**
- ***Density*** is controlled by the **ISO setting**

A close-up, artistic shot of a camera lens. The lens is dark and metallic, with several concentric rings visible. The text "How to control exposure" is overlaid in white, sans-serif font across the center of the lens. The background is dark and out of focus, showing parts of the camera body.

How to control exposure

1/30 second

white subject reflected so much light that the meter
recommended an underexposure that dulled it to
(above, left). A reading from an 18 per cent gray card
an exposure that revealed true whites (right).

1/4 at 1/30 second

This is 18% gray.

The problem with only knowing one way to expose

Underexposure

Overexposure

Why is learning about
exposure control important?

To possess control of light as
it is expressed in your image

Increased exposure for a brighter image

Decreased exposure for a darker image

Exposure Compensation

Exposure Compensation

Technique for adjusting the exposure indicated by a photographic exposure meter, in consideration of factors that may cause the indicated exposure to result in a less-than-optimal image.

Exposure Compensation

Shot on auto meter

Shot to overexpose so that shadow detail is visible (more light is allowed into camera)

Increased exposure for a brighter image

Decreased exposure for a darker image

f/8 at 1/250

The problem here is the opposite of that caused by the sky in the first photo. The dark background so dominates the frame that the light meter measurement overexposes the figure (above, left). A close-up reading of the man's face gave correct exposure.

f/8 at 1/250

11 at 1/250

The bright sky occupying half the picture produced an initial reading that underexposed the sheep and the farm above, (left). Aiming the camera lower to exclude the sky gave a correct exposure for the main subjects (right).

1/8 at 1/250

at 1/30 second

white subject reflected so much light that the meter
ally recommended an underexposure that dulled it to
y (above, left). A reading from an 18 per cent gray card
e an exposure that revealed true whites (right).

1/4 at 1/30 second

Tyler Chandler

What is a Stop?

- A change in an exposure setting, either **aperture**, **shutter speed**, or **ISO** that either doubles or halves exposure

- $\times 2$

- or $\frac{1}{2}$

2	4	4	8
128	64	32	16
256	512	1024	2048
